| Professional Summary | Cyber Security enthusiast and 9th semester BSc Software Engineering student with hands on experience in beginner web penetration testing, Windows, Kali Linux administration, and computer networking. Passionate about ethical hacking, vulnerability assessment, and continuous learning through practical labs and CTFs.                                                                                                                                                                                                                                                                                                                                                                        |

## Projects

### Student Portal

- C Console Project.
- Built a console-based student portal using the C programming language.
- Added student registration, search, and result features.
- Used file handling and structured programming concepts.
- Technologies: C, File Handling.

### University Management System

- Java Project.
- Developed a desktop-based university management system in Java.
- Implemented student, faculty, course, and result management modules.
- Applied object-oriented programming and database integration concepts.
- Technologies: Java, OOP.

### Hall Management System

- Database Project.
- Designed and implemented a relational database for university hall management.
- Managed student records, room allocation, payments, and reports.
- Wrote SQL queries, joins, views, and normalization.
- Technologies: SQL, DBMS, ER Diagram.

### Alumni Connect: Next-Gen Relationship & Fundraising Suite

- System Design Course Project.
- Designed a scalable university alumni engagement and fundraising platform.
- Created system architecture, database design, and user workflow diagrams.
- Focused on alumni networking, donation management, and event management.
- Technologies: System Design, UML.

### Firefighter Robot

- Robotics Course Project.
- Developed a prototype robot capable of detecting and responding to fire in a controlled environment.
- Integrated sensors, motors, and microcontroller-based control logic.
- Worked collaboratively on hardware assembly and testing.
- Technologies: Robotics, Embedded Systems.
